I really don't know. The thought is that at this point it doesn't really matter where it goes as the environmental issues won't change, even if the alignment does. I do know they are working on a cross section design that is protective of both surface water and groundwater; the engineered barriers design and material management are the important part.

My brain has already gone on vacation!! When do you think that the City will know where the final alignment will be for the 40<sup>th</sup> St. sewer and for the open channel by the coliseum? Thank you for the mgmt standards.

Lisa – the reference to the Waste Water Capital Projects management standards is in the Intro – on page 1, 5<sup>th</sup> paragraph. When do you think that

As for Minnesota – going to see my brother's new lake home in No. Minn. Hopefully there will still be some fall colors. Speaking of fall colors I was in Silverton and Durango all last week for work and the colors were "OMG" at their peak.

And the garage is delayed until spring as I'm dealing with Xcel on moving a power line and will also have to check on the alignment of the sewer line and the intended placement of the garage. Too many things to figure out to get this constructed and the grass put back before the snow flies. I wouldn't care about the grass during the winter except that I can't deal with a muddy dog coming into the house all winter long.

Paula – apologies for taking so long to get back to you! We really do not know where the alignment will finally be. At the moment, we think it will more or less be similar to the old 40<sup>th</sup> Street Outfall, coming out of the pip through Pepsi, flowing along where Mc Farland drive is, through Globeville Landing Park and emptying to the river in a new outfall a bit downstream from the existing one. The drainage from I-70 would then tie in to the south of the Coliseum. As for the Wastewater Capital Projects Management Standards, I finally heard back from WW and they are not sure what this is. Where is it referenced in the MMP?

Not sure about Minnesota, but house stuff and hiking sound good! Are you building your garage?

Lisa – I don't think we had many comments but I am trying to complete my review by end of tomorrow. There are a couple of references in the MMP (so far) that were not provided and I'm wondering if you can send those.

- Figure 1 – showing the alignment of the channel
- The “Wastewater Capital Projects Management Standards...”

I'm not going any place fabulous – just back to Minn for a short visit and then to take care of some house stuff and do a little hiking, etc. Maybe next winter I'll get someplace fabulous and

warm!

Hi Paula! I'm afraid I don't have those comments as you were working directly with CTL-Thompson, who wrote the original. I remember you had approved that one for the pipe, and I just took it and changed the scope to be open channel; not much else is really different. Are you going somewhere fabulous? ☺

**Importance:** High

Lisa – I seem to recall that I had reviewed an earlier version of the MMP but I can't seem to find my comments/edits. If that is the case do you still have my earlier comments? I am reviewing the current version and would like to be able to go back to those comments (if they exist). Please send them to me ASAP so I can get this done by COB tomorrow.

Thanks
